

Transponder Matrix

Overview of technologies supported by ELATEC RFID readers and modules

> Standard reader configuration supports over 60 RFID technologies

ELATEC functional extensions Further RFID technologies Apple NFC support* V option** P option I option supports custom private keys for G-Prox, HID Prox HID iCLASS and other Apple in combination with the technologies, Indala, ioProx, technologies A option Nexwatch A option access to passes stored in Apple mobile devices via

Unless otherwise agreed with ELATEC, each ELATEC RFID reader/module is delivered with a standard firmware version that might be older than the latest firmware developed by ELATEC. The standard firmware version of an ELATEC reader/module can be changed using the ELATEC AppBlaster tool. Alternatively, you can also download or request a specific firmware version on the ELATEC website.

This transponder matrix gives an overview of all RFID technologies supported by ELATEC RFID readers and modules running with the firmware version 4.64.

^{*}For Apple licensees only and eligible implementers. Please contact ELATEC for details.

^{**}The V option is only available in combination with the A option.

Overview of ELATEC product families of RFID readers/modules

Apple VAS and Access passes both include the Enhanced Contactless Protocol (ECP) 2.0.

Please note:

Apple VAS and Access passes can be tested on request on other ELATEC RFID readers/modules of the TWN4 family. For best convenience reasons and best performance, no other RFID technology (LF, HF) should be enabled in parallel to Apple technologies. For system integrators and PCB module design-in, Apple may require additional testing and proof that the final product meets all Apple requirements for VAS and Access passes.

^{*}For Apple licensees only and eligible implementers. Please contact ELATEC for details.

^{**}Requires the ELATEC AV options.

^{***}Requires the ELATEC A option.

Appendix

Terminology

Term	Explanation
	Contactless NFC passes can be stored in an Apple mobile device (iOS). ELATEC uses the term "Access pass" for
(Apple) Access pass	this type of passes. Access passes are stored in a secure environment on iOS devices. There are different storage formats of Access passes. ELATEC readers with Access pass support also use the underlying ECP 2.0 protocol.
	Access passes must not be confused with VAS passes.
	Stands for "Enhanced Contactless Polling" protocol. ECP is a low-level contactless protocol defined by Apple,
ECP / ECP 2.0	extending parts of the ISO 14443 specifications, to ensure best performance when detecting Apple mobile devices
	using NFC.
	For ELATEC products, the term "RFID module" refers to OEM PCBs, i.e. the bare electronic board. These devices are
RFID reader/module	intended to be integrated into a final (host) product by system integrators and device vendors. The term "RFID
	reader" is used for final devices, i.e. including a housing, connectors and / or cabling, and of course an RFID module.
	The term "transponder" is an association of " trans mitter" and "res ponder ". "RFID tag" and "RFID label" are common
	synonyms used for "transponder".
Transponder	Basically, an RFID transponder consists of a chip that contains information transmitted to an RFID reader through
	electromagnetic waves. A transponder can have different forms, like a card, a key fob or even a smartphone. The
	term "transponder" can also refer to any type of contactless-enabled smart cards.
	Stands for "Value-Added Services".
	Apple VAS is an Apple wallet solution for many loyalty use-cases. Users can load so-called VAS passes into their
VAS	wallet on their mobile devices (iOS). Most can be read visually (barcode, QR code). NFC-based VAS passes are
	available as well. Readers with VAS support can read these VAS passes. Technically, the ECP 2.0 protocol is used
	when reading VAS passes.
